NimbusDesk Administrator Handbook

Revision 7 · March 2026 · For workspace owners and IT administrators

1. What NimbusDesk is

NimbusDesk is a shared inbox and customer-support workspace. Conversations from email, live chat and the web widget land in one queue; routing rules send them to the right team; the API exposes the same objects to your own systems.

A workspace belongs to exactly one region: United States, European Union or Australia. The region is chosen when the workspace is created and cannot be changed later. Data does not leave that region, including backups and exports.

2. Roles and permissions

Owner can do everything, including deleting the workspace and changing the billing plan. **Admin** manages people, rules and integrations but cannot delete the workspace. **Agent** works the queue. **Viewer** reads reports and conversations but cannot reply. Every workspace must keep at least one Owner.

3. Single sign-on

Google and Microsoft OAuth are available on every plan. SAML 2.0 single sign-on is available on Business only, and so is SCIM provisioning. On Team and Starter, people sign in with OAuth and are invited by email.

Business workspaces can enforce SAML-only sign-in. When enforcement is on, password and OAuth logins are refused for everyone except the Owner recovery account. Enforcement can be turned off by the Owner, but only after confirming the identity provider metadata is still valid.

4. Data retention and export

Deleted conversations stay recoverable for 30 days and are then permanently purged. Backups are retained for 35 days. A full workspace export is available to Owners on every plan and is delivered as a signed download link that expires after 24 hours.

5. Support and escalation

First-response targets: Starter two business days, Team eight business hours, Business four hours with 24/7 coverage. Escalation is triggered by the workspace Owner or by any Admin on a Business plan. Severity 1 incidents (workspace unavailable) page the on-call engineer immediately.

6. Refunds and billing corrections

A full refund is available within 14 days of the initial charge. After day 14, annual plans are refunded pro rata, minus the months already used. Monthly plans are not refunded after day 14 but can be cancelled to stop the next charge.

Duplicate charges are confirmed within 2 business days and refunded to the original payment method. Refunds above 2,000 USD require finance approval, which adds up to 3 business days. Seat changes are prorated on the next invoice.

7. Troubleshooting

The admin console shows the error code on the affected integration or mailbox. The three codes below account for most support tickets.

Code	Meaning	Fix
E-204	OAuth token expired	Reconnect the integration in Settings > Integrations
E-311	Mailbox storage quota exceeded	Archive conversations or raise the seat storage limit
E-118	Webhook endpoint returned 4xx	Check the signing secret and the retry policy

If E-204 persists after reconnecting, revoke the NimbusDesk app in the identity provider and connect again. A stale refresh token on the provider side looks identical to an expired token on ours.

8. API rate limits

Requests are limited per workspace per minute: Starter 60, Team 300, Business 600. Each limit allows a burst of twice the per-minute rate for up to 10 seconds. When the limit is exceeded the API returns HTTP 429 with a Retry-After header in seconds; clients should honour it rather than retrying immediately.

9. Audit log

The audit log is available on Business only and keeps 180 days of events: sign-in, role change, rule change, export and API key creation. Owners and Admins can filter by actor, action and date, and export the result as CSV. Audit records cannot be deleted before the retention window ends.
